Eyes and Lips Update

Black-and-blue or just tired in L.A. on January 11?

Simpson's pout is still overly plump (from possible Restylane injections, as *Us* reported in December), and last week, she seemed to nurse a shiner. Surgery? Shadow? "It is black-and-blue - from trauma or injections," says NYC plastic surgeon Steven Fallek. Adds plastic surgeon Mitchell Chasin, "The location suggests filler like Restylane, which can reduce dark bags or smooth the area." Says a pal, "She was tired." Her rep declined comment.
